description

The TM497FBK32H/I is a 16M-byte dynamic random-access memory (DRAM) module organized as four times 4194304 × 8 bits in a 72-pin leadless single-in-line memory module (SIMM). The SIMM is composed of eight TMS417409ADJ DRAMs, each in 24/26-lead plastic small-outline J-lead (SOJ) packages mounted on a substrate with decoupling capacitors. The TMS417409ADJ is described in the TMS416409A, TMS417409A data sheet (literature number SMKS893).

The TM497FBK32H/I SIMM is available in the single-sided BK leadless module for use with sockets. The TM497FBK32H/I features $\overline{RAS}$ access times of 50, 60, and 70 ns. This device is characterized for operation from 0°C to 70°C.

The TM893GBK32H/I is a 32M-byte DRAM organized as four times 8388608 × 8 bits in a 72-pin leadless SIMM. The SIMM is composed of sixteen TMS417409ADJ DRAMs.

The TM893GBK32H/I SIMM is available in the double-sided BK leadless module for use with sockets. The TM893GBK32H/I features $\overline{RAS}$ access times of 50, 60, and 70 ns. This device is characterized for operation from 0°C to 70°C.

operation

The TM497FBK32H/I operates as eight TMS417409ADJs connected as shown in Figure 1 and in Table 1. The common I/O feature dictates the use of early write cycles to prevent contention on D and Q.

The TM893GBK32H/I operates as sixteen TMS417409ADJs connected as shown in Figure 2 and in Table 2. The common I/O feature dictates the use of early write cycles to prevent contention on D and Q.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

† Part numbers in this data sheet are for the gold-tabbed version; the information applies to both gold-tabbed and solder-tabbed versions.

DATA BLOCK	$\overline{\text{RASx}}$	$\overline{\text{CASx}}$
DQ0−DQ7	$\overline{\text{RAS0}}$	$\overline{\text{CAS0}}$
DQ8−DQ15	$\overline{\text{RAS0}}$	$\overline{\text{CAS1}}$
DQ16−DQ23	$\overline{\text{RAS2}}$	$\overline{\text{CAS2}}$
DQ24−DQ31	$\overline{\text{RAS2}}$	$\overline{\text{CAS3}}$

Table 2. TM893GBK32H/I Connection Table

DATA BLOCK	$\overline{\text{RASx}}$		$\overline{\text{CASx}}$
	Side 1	Side 2	
DQ0−DQ7	$\overline{\text{RAS0}}$	$\overline{\text{RAS1}}$	$\overline{\text{CAS0}}$
DQ8−DQ15	$\overline{\text{RAS0}}$	$\overline{\text{RAS1}}$	$\overline{\text{CAS1}}$
DQ16−DQ23	$\overline{\text{RAS2}}$	$\overline{\text{RAS3}}$	$\overline{\text{CAS2}}$
DQ24−DQ31	$\overline{\text{RAS2}}$	$\overline{\text{RAS3}}$	$\overline{\text{CAS3}}$

refresh

The refresh period is extended to 32 ms and, during this period, each of the 2048 rows must be strobed with $\overline{\text{RAS}}$ to retain data. $\overline{\text{CAS}}$ can remain high during the refresh sequence to conserve power.

power up

To achieve proper operation, an initial pause of 200 µs followed by a minimum of eight initialization cycles is required after full V_{CC} level is achieved. These eight initialization cycles need to include at least one refresh ($\overline{\text{RAS}}$-only or CBR) cycle.

single-in-line memory module and components

PC substrate: 1,27 ± 0,1 mm (0.05 inch) nominal thickness; 0.005 inch/inch maximum warpage
Bypass capacitors: Multilayer ceramic

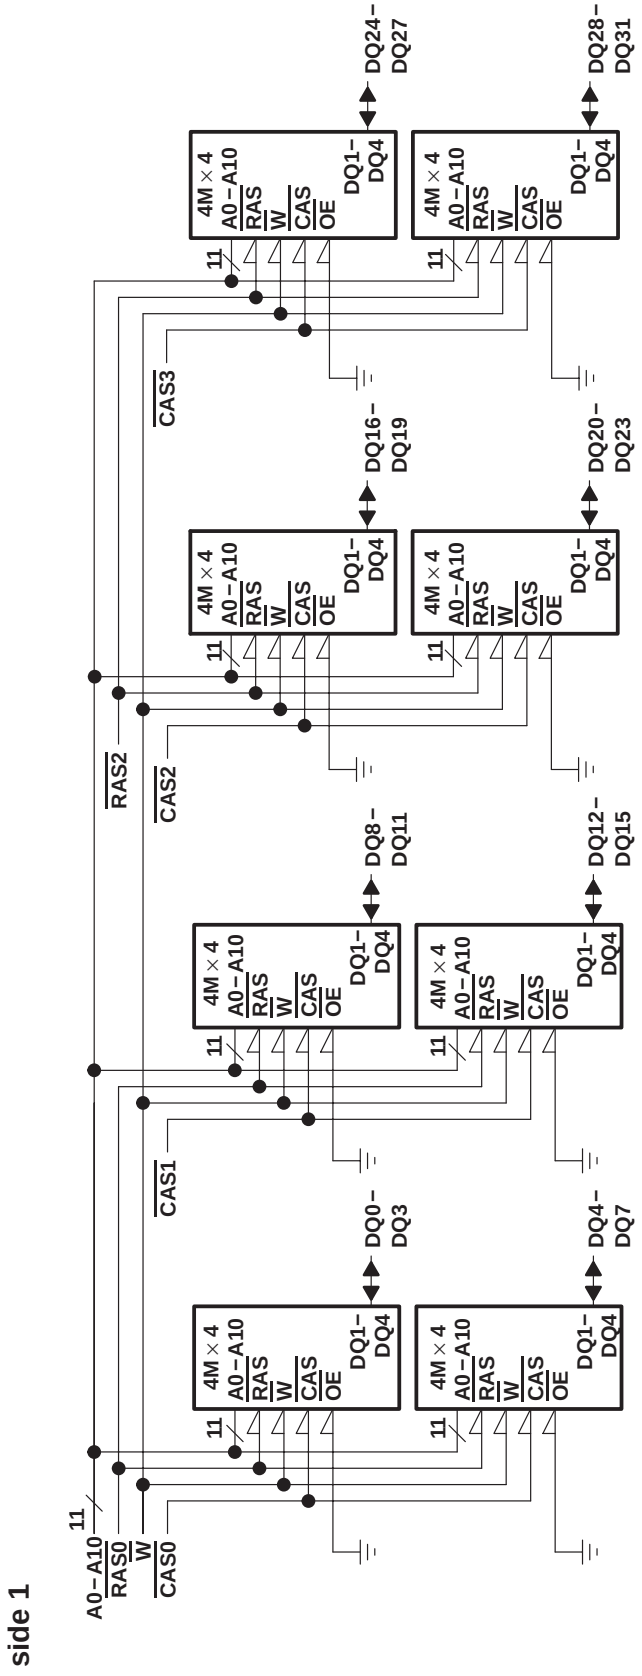

Figure 2. Functional Block Diagram of TM893GBK32H/I

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage range, V_{CC} (see Note 1) . . . . . − 1 V to 7 V
Voltage range on any pin (see Note 1) . . . . . − 1 V to 7 V
Short-circuit output current . . . . . 50 mA
Power dissipation . . . . . 8 W
Operating free-air temperature range, T_A . . . . . 0°C to 70°C
Storage temperature range, T_{stg} . . . . . − 55°C to 125°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltage values are with respect to V_{SS}.

recommended operating conditions

		MIN	NOM	MAX	UNIT
V_{CC}	Supply voltage	4.5	5	5.5	V
V_{IH}	High-level input voltage	2.4		6.5	V
V_{IL}	Low-level input voltage (see Note 2)	− 1		0.8	V
T_A	Operating free-air temperature	0		70	°C

NOTE 2: The algebraic convention, where the more negative (less positive) limit is designated as minimum, is used for logic-voltage levels only.

electrical characteristics over recommended ranges of supply voltage and operating free-air temperature (unless otherwise noted)

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
